

KRANTHI KANDI

Senior Technical Program Manager | PMP | CSPO | SAgE 4

kkandi.po@gmail.com • (314) 952-6143

PROFESSIONAL SUMMARY

Results-driven Senior Technical Program Manager with 10+ years of experience directing enterprise-scale, cross-functional programs for global engineering organizations. Proven ability to develop overall program strategy, manage budgets and resource allocation plans, and own end-to-end program P&L while achieving 95%+ on-time delivery. Skilled at communicating program progress and escalations to senior stakeholders, driving continuous improvement, and integrating innovative technologies across distributed teams. PMP-certified leader with a track record of mentoring engineers, standardizing program management practices, and translating complex technical requirements into actionable roadmaps that align with global business unit strategy.

CORE COMPETENCIES

Program Strategy & Governance • Budget & Resource Planning • P&L Management • Global Stakeholder Management

Cross-Functional Team Leadership • Risk Management & Escalation • Agile/SAFe/Waterfall Methodologies • CI/CD & DevOps

Innovation & Technology Integration • KPI/SLA Management • Process Improvement • Engineering Team Mentorship
Data Platforms: Snowflake, Databricks, BigQuery, Kafka • Cloud: AWS, Azure • Tools: JIRA, Confluence, Smartsheet, ServiceNow, Asana

PROFESSIONAL EXPERIENCE

Technical Program Manager | Cisco Systems, San Jose, CA | March 2025 — September 2025

- Directed Agile delivery for 3 cross-functional engineering teams, driving overall program strategy and execution through daily standups, sprint planning, and retrospectives using JIRA and Confluence—improving sprint velocity by 25% and achieving 95% on-time delivery
- Owled end-to-end program coordination across frontend (React, JavaScript) and backend (Java, Python) teams, managing dependency resolution, resource allocation, and risk mitigation, reducing deployment issues by 40%
- Served as primary strategic partner for enterprise clients—communicating program progress, escalations, and issue analysis to product stakeholders, and collaborating with business unit management to recommend process and product improvements, resulting in 100% client satisfaction
- Established and enforced code quality standards and program management guidelines across engineering teams, providing tangible feedback that elevated overall delivery quality and results
- Implemented automated quality gates in CI/CD pipelines (GitLab CI, SonarQube, Docker), blocking 15+ potential production issues and reducing system instability through rigorous pull request governance
- Drove innovation in deployment automation by orchestrating production releases and monitoring post-go-live performance, leading incident response to resolution in under 2 hours average
- Mentored and developed 12+ engineers through structured 1:1s, performance reviews, and career development planning; partnered with HR on capacity planning and skill gap analysis to optimize resource allocation
- Led Kafka-based data migration program from legacy systems to Snowflake, implementing Airflow-orchestrated ETL workflows migrating 10M+ messages daily with zero data loss—demonstrating integration of new technology into enterprise infrastructure

Senior Technical Program Manager | El Dorado Trucking Software (EDTS) | November 2017 — March 2025

- Directed end-to-end planning, budgeting, and execution of multi-product software programs across infrastructure, UX, frontend, and backend services—owning overall program P&L, resource allocation plans, and cross-team alignment across distributed global teams
- Developed and maintained comprehensive program strategy documentation including architecture diagrams, escalation procedures, CI/CD workflows, and release plans using Lucidchart, Figma, and Confluence to support executive decision-making and knowledge transfer
- Communicated program status, escalations, and issue analysis to product and business unit stakeholders; collaborated with internal teams and external development partners to implement continuous improvement changes, maintaining SLA compliance at 99.5% uptime
- Drove innovation by standardizing operational processes across teams and vendors—implementing automation pipelines (GitLab CI) and embedding quality gates (SonarQube, OWASP) that improved delivery velocity and reduced production risk
- Established monitoring and observability infrastructure (Datadog, Kibana) enabling proactive issue detection and reducing mean time to resolution (MTTR) by 35%
- Implemented data-driven program management culture with KPI dashboards and executive reporting using Databricks, dbt, Tableau, and Google Data Studio—ensuring accountability and enabling strategic resource decisions

- Managed activities of internal and external development partners; reviewed and evaluated program plans for compliance with standards and provided structured feedback to improve program management quality across the organization
- Configured ServiceNow ITSM for incident, problem, and change management—establishing automated workflow routing that streamlined operations and reduced escalation times
- Led root-cause analysis and post-mortem sessions for high-impact production issues, reporting on KPIs (API latency, failure rates) and driving systemic improvements aligned with business unit strategy
- Mentored junior TPMs and engineers on program management best practices, Agile ceremonies, and delivery forecasting—setting an example of program management innovation and excellence

Java Developer / Data Engineer | Cisco Systems, San Jose, CA | March 2015 — November 2017

- Developed and deployed Java-based enterprise applications supporting mission-critical business processes, managing the full project lifecycle from proof-of-concept through production deployment
- Led technical planning for infrastructure modernization projects, translating complex business requirements into actionable development tasks and technical specifications aligned with organizational strategy
- Engineered high-volume data processing workflows and Kafka topic partitioning strategies handling 10M+ messages/day, reducing processing time by 45% through performance optimization
- Built automated ETL pipelines and business intelligence solutions using SQL and reporting tools (Tableau, Crystal Reports, SSRS) to support executive decision-making
- Managed containerized cloud applications and automated CI/CD deployment pipelines, enabling rapid, scalable delivery of distributed systems

Crystal Report Developer | Fidelis Care, Buffalo, NY | October 2014 — March 2015

- Developed complex reporting solutions (SSRS, Crystal Reports, Tableau) enabling data-driven decision-making for healthcare operations and clinical teams
- Implemented automated reporting processes that reduced turnaround times by 60% and improved data reliability for compliance reporting

EDUCATION

Master of Science in Software Engineering | University of Houston — Clear Lake | 2012 — 2014

CERTIFICATIONS

- Project Management Professional (PMP) — Project Management Institute
- Certified Scrum Product Owner (CSPO) — Scrum Alliance
- SAFe 4 Certified Practitioner — Scaled Agile Framework
